

src/components

- Basic react components implemented here

src/store

- Contains Redux implementation and related functionality
- index.js
 - Implementation of combineReducers and configureStore
- **/store/containers**
 - Redux HOC components to connect any component to the store
 - **Import from here instead of the base component or wrapper**
- **/store/middleware**
 - Redux related middleware
 - Extended Redux functionality
- **/store/middleware/thunk**
 - index.js
 - Index is where the async operations related to the Redux store takes place
 - All api and resource intensive functionality is implemented here
 - Api.js
 - Thunk helper class that contains all of the Axios calls in one place
- **/store/reducers**
 - actions.js
 - Exported functions that return an object that contains the corresponding Redux dispatch type and payload to be used by the reducer
 - **No logic allowed within actions**
 - index.js
 - Implementation of reducer
 - **No logic allowed within reducer**
 - selectors.js (optional)
 - Implement functions here when you need to manipulate data being pulled from the store

src/wrappers

- Wrapper components to add specific use-case functionality
- Utilize useEffect to listen to and react to changes in Redux
